## INTRODUCTION

We are the only one company in telecom services providing http api services in India with maximum margin at low pricing since 2012. Developer, webmaster and all other freelancers can use our recharge & bill api instantly and easily. We provide very good margin on every recharge processed with us. Its not complex like other api vendors services. We provide variable margin or commission on every recharge of operators in India.

## HOW IT WORKS?

- ✓ Create free account on [joloapi.com](https://joloapi.com)
- ✓ Integrate API on your web application
- ✓ You are ready to serve your customers

# HTTP API URL

```
https://joloapi.com/api/findplan.php?userid=yourusername&key=yourapikey  
&opt=operatorcode&cir=circlecode&typ=categorycode&amt=amount&max=10  
&type=json
```

URL Parameters	Description
Userid	Your username
key	Your api key
Opt	Operator code (see appendix A)
Cir	Circle code (see appendix B)
Typ (optional)	Plan or offer type or category code (see appendix C)
Max (optional)	Limiting the number of rows
Amt (optional)	Filter out search by amount/denomination
Type	json response

# API RESPONSE

If request is FAILED:

Reason of failure as response in simple text format

If request is SUCCESS:

api response will be in json format

```
[  
{"Detail":"Rs.7.77 Talktime","Amount":"10","Validity":"Unlimited"},  
{"Detail":"Rs.15.54 Talktime","Amount":"20","Validity":"Unlimited"},  
...and so on...  
]
```

URL Response row fields	Description
Detail	Description of plan or offer in text
Amount	Amount value or denomination in numeric
Validity	Validity of plan or offer in text

# PHP EXAMPLE

```
<?php

$ch = curl_init();
$timeout = 30; // set to zero for no timeout
$myurl = "https://joloapi.com/api/findplan.php?userid=demo&key=000000&opt=28&cir=1&typ=TUP&max=&amt=";
curl_setopt ($ch, CURLOPT_URL, $myurl);
curl_setopt ($ch, CURLOPT_HEADER, 0);
curl_setopt ($ch, CURLOPT_RETURNTRANSFER, 1);
curl_setopt ($ch, CURLOPT_CONNECTTIMEOUT, $timeout);
$jsonxx = curl_exec($ch);
$curl_error = curl_errno($ch);
curl_close($ch);
$someArray = json_decode($jsonxx, true);

if (count($someArray) > 0) {

    echo "<table><thead><tr>
    <th>Detail</th>
    <th>Amount (Rs.)</th>
    <th>Validity (days)</th>
    </tr></thead><tbody>";

    foreach ($someArray as $key => $value) {
        echo " <tr><td>" . $value["Detail"] . "</td> <td>" . $value["Amount"] . "</td> <td>" . $value["Validity"] . "</td> </tr>";
    }
    echo "</tbody></table><br/>";

} else {
    echo "No offer details available for this category";
}

?>
```
