# Features

## Trending Features

S/No.	Detail
1.	Virtual balance system: You can give unlimited fund to your retailer/customer even if you don't have funds with us.
2.	Add third party services: You can request us for any third party service integration related to recharge, bill payment, money transfer, sms service at Rs.1,000 per api link. If third party has 4 api link that we need to setup then total charge will be Rs.4,000 only. Its one time setup fee. You can manage third party api credential from admin dashboard.
3.	Unlimited product creation: You can create your own product with own pricing & margin from admin dashboard. Its fully customizable at any point of time. You can activate different product on different retailer/customer with one click. You can set/change margin operator-wise or product-wise with one click.
4.	Advanced retailer management: You can edit any retailer/customer profile, active or de-active any service or product. You can credit or debit money from retailer/customer account.
5.	Service shift: You can shift any operator to any api whenever you need with one click. If third party service goes down then you can shift to jolo api with one click or wise-versa.
6.	Maximum profit: To maximize profit, you can set different third party service to different operator anytime with one click. If third party margin in one operator is less then you can set jolo api for that particular operator or wise-versa.
7.	High security: Our first priority is financial security of our customers and also your customers. Our developer team have worked hard on this important aspect to avoid any leaks/hacks. We have used most advanced security system in this website. Not only this, we have also setup OTP based login (optional) self managed by admin or retailer/customer to increase security level. Admin, retailer/customer will also gets notification on email/sms if anything unusual activity detected in their account.
8.	API reseller (high demand): You can sell your own portal api to your retailer/customer like we do. You can charge api fee from your retailer/customer with your own pricing and margin and keep 100% profit. We have pre-build everything that is required to run api business like api documentation for integration support, api

	management with security. You can activate or deactivate api access on any retailer/customer.
9.	Bulk recharge: Your retailer/customer can also do bulk recharge by uploading .csv file in specific format to automate recharge. Retailer/customer can start, pause, stop queue anytime.
10.	Wallet to Wallet transfer: Your retailer/customer can send balance to other retailer/customer registered on same website.

## **Margin/Commission List**

By default, Joloapi & Jolosoftware services are integrated in readymade website. Therefore, you need to buy margin plan from [joloapi.com](http://joloapi.com) and [jolosoftware.com](http://jolosoftware.com) according to your requirement. They offer different margin plan with different pricing at affordable rates. If you do not want to use Joloapi & Jolosoftware services then you can use any third party services that you like. For margin/commission detail, visit respective third party website.

## Why you should buy?

- ✓ Flexibility and freedom to choose third party services. Nowadays, you cannot rely on one third party service for lifetime uptime service. You may want to switch to other third party when existing service provider server is not up to the mark. To solve this, our readymade website is design in such way to allow you to switch your service provider anytime with a click. Our engineers also provided a feature by which you can switch partial services to one service provider and rest to other. For example, you can use Jio operator on "ABC" third party, Vodafone on "XYZ" third party at same time. This makes your website intelligent and ability to grow your business and profit.
- ✓ Amazon powered cloud servers on which your website and mobile application will be hosted is always 24x7 up. No downtime. If you Google about cloud website hosting then you will get more information why its important to host your website on cloud based platform instead of single platform.
- ✓ SSL support is another very important feature of our readymade website which enables high security and increment in gaining trust of customer.
- ✓ Encrypted coding done by our engineers in readymade website makes it highly secure to next level.
- ✓ Regional language support is another very important feature of our readymade website which gives freedom to choose language like Hindi, English, etc.
- ✓ Multiple theme with different colours is also put together to add up to beauty and design of readymade website. Appearance also help in promoting your business and gaining you more profit.

***That's it folks! Hoping for your positive decision.***
